Why is the traileed watermark still being displayed after activating the plugin?

All the cache files will be created before activation is stored in the cache memory. The cached images will be added with a watermark. After activating the plugin, please use the below command to clear the existing cache. And then all the PDF files will be converted to a new image without a watermark.

```
$webapp = Get-SPWebApplication  
Remove-SPFoxitWebReaderCache $webapp
```

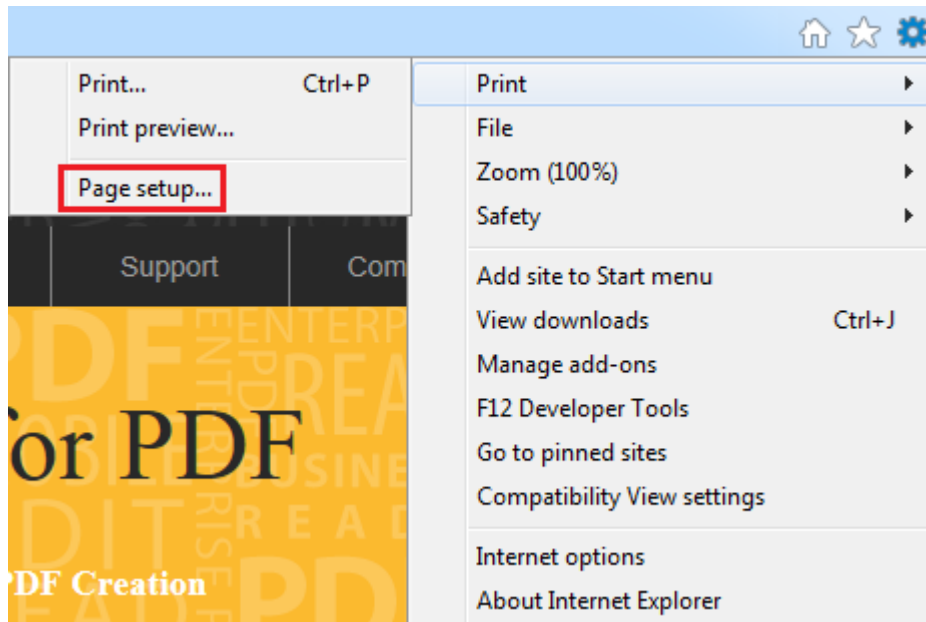

How does WebPDF Reader support Sticky Note annotation?

WebPDF Reader support the 7 standard Sticky Notes. But the Notes will all show as yellow irrespective of what color it is in desktop PDF Reader.

When I print the file, there are some difference between the output file and the actually file. E.g. error like blank or truncated pages, incorrect position of annotation or annotation missing?

You can try to set the printing options as below to solve this issue. Set the page size as A4, Margins as 0 and check the Print Background Colors and Images to solve this issue.

e.g. In Internet Explorer, open print option, select "Page Setup".

Set the options as below, click OK to make it is effective:
