Deployment and Configuration

Using Group Policy

What is Group Policy?

Group Policy (GPO), a feature of the Microsoft <u>Windows NT</u> family of <u>operating systems</u>, is a set of rules that control the working environment of user accounts and computer accounts. It offers the centralized management and configuration of operating systems, applications, and users' settings in an <u>Active Directory</u> environment.

Group Policy can configure most system settings, save power by utilizing smart power settings, give individual users more control over their machines with administrator privileges and increase system security.

This section will introduce steps to help you master how to quickly add and modify the new GPO template for configuring your installation of Foxit PDF Editor.

Personal Computer Setting

There are two file types of group policy template of Foxit PDF Editor: .adm and .admx. Different types are compatible with different operation systems, but have the same settings. The template of .adm file type is compatible with Windows XP and later, while .admx is compatible with Server 2008, Server 2012, Windows 8 and later.

Set Template Preference

For .adm file, follow the steps as below:

- Use the shortcut keys "Windows + R" and type gpedit.msc in the **Run** window to open Group Policy Editor.
- Right-click the management template and choose Add/Remove Template in the
 context menu. In the opened dialogue box, add the group policy template of Foxit
 PDF Editor. The Foxit PDF Editor template will appear in the left navigation pane and
 you can set its template preferences.

For .admx file, put the .admx file in C:\Windows\PolicyDefinitions and do the setting. The .admx file should be used in combination with an .adml file. And the .adml file should be put in C:\Windows\PolicyDefinitions\language. For example, if in the English OS, the .adml file should be put in C:\Windows\PolicyDefinitions\en_us.

Example: Not Show Community Language

- Choose Foxit PDF Editor > Preferences > Application Language.
- Double-click Application Language to open the dialog box and check the option Enabled and check Not Show Community Language. Then only the official languages will show in the File > Preferences > Language.
- If the option **Not Configured** or **Disabled** is checked, the languages translated by

community will be displayed.

• Other settings can be configured in the same way.

Note: Group Policy setting includes computer configuration and user configuration.

Computer configuration takes precedence over user configuration. The application will use the computer configuration if both the computer and user configure a specific function at the same time. Please note that if the option **Disabled** is a valid configuration, the setting will be shown in the help information. Otherwise, the corresponding registry entry will be removed as selecting Unconfigured. (The value of the option Disabled in the Group Policy Template of Foxit PDF Editor is invalid.) Foxit PDF Editor will retain all your configuration settings when you upgrade it to a new version.

GPO Deployment (for Server)

Create GPO Management

- If you already have an Active Directory domain and organizational unit configured, please skip to "Apply the Foxit Template" section.
- Choose Start > Windows Administrative Tools (for Windows 10) > open "Active Directory Users and Computers" > right-click your domain > choose New > Organization Unit.

 In the opened New Object - Organization Unit dialogue box, type the unit name (For this example, we have named the unit "Foxit") and click OK.

• Right click the created organization unit "Foxit" and choose **New** > **User**. For this example, we have named the user "tester01".

 Click Start > Windows Administrative Tools (for Windows 10) > open the Group Policy Management console and right-click the created organization unit "Foxit" and choose Create a GPO in this domain, and Link it here....

If you cannot find the Group Policy Management in Windows Administrative Tools, please install the application package GPMC.MSI. You can download the package by clicking the link http://www.microsoft.com/en-us/download/details.aspx?id=21895.

Tip: To deploy Foxit PDF Editor's installers or plugins across your organization through GPO, please refer to the instructions <u>here</u>. You can also perform the deployment through <u>Microsoft Intune</u> or <u>Configuration Manager</u>. Configuration Manager was previously named System Center Configuration Manager (SCCM) and now is part of Microsoft Endpoint Manager.

Apply the Foxit Template

• Type the GPO name in the "New GPO" dialogue box and click **OK**.

• Right-click the new GPO and choose **Edit...** in the right-click menu to open Group Policy Editor.

• Right-click the **Administrative Templates** and choose **Add/Remove Templates...** to add Foxit PDF Editor template. Please refer to <u>Set Template Preference</u>.

For configuring options, please refer to <u>Example: Not Show Community language</u>.

Using Foxit Customization Wizard

Foxit Customization Wizard (hereafter, "the Wizard") is a configuration utility for customizing (configuring) the Foxit PDF Editor or Foxit PDF Reader installer before large scale deployment. For example, you can license the product on a volume scale with the Wizard so that you do not need to register and personalize each copy of the installation. Foxit PDF Editor or Reader will retain all your configuration settings when you upgrade it to a new version.

The Wizard allows enterprise IT administrators to do the following:

- Modify an existing MSI package and save all the modifications into a transform file (.mst).
- Directly configure settings from scratch and save all the configurations as an XML (.xml) file.
- Customize settings based on an existing XML (.xml) file.
- Configure which digital ID files are allowed to use.

Get started

Run the Wizard, you will see the following options on the Welcome page:

- MSI
- XML Editor for Foxit PDF Editor
- XML Editor for Foxit PDF Reader
- SignITMgr

Please select one option to begin. Take **MSI** for example. After you open an MSI installer, you will see the Wizard workspace below.

The workspace is made up of four parts: Title Bar, the top Menu bar, the Navigation bar, and the main work area.

- 3. The left-hand **Navigation bar** links to the specific configurable options.
- 4. The **Main Work Area** displays configurable options according to the configuration settings you choose.
