

How **Foxit PDF Editor's** Custom Dynamic Stamps Transformed a Banking Customer's Workflow

CASE STUDY

| Executive Summary

A major financial institution in the banking sector relied on Foxit PDF Editor to handle large volumes of sensitive documents across compliance, legal, and operations teams. While Foxit had already improved their document security and collaboration workflows, the bank encountered growing friction around dynamic stamp usage—a core part of their approval and audit processes. To solve this, Foxit introduced a custom JavaScript-enhanced stamping solution that automated time-stamping, reduced manual errors, and improved regulatory compliance—the result: faster approvals, streamlined workflows, and stronger internal adoption across departments.

| Stalled by Manual Stamping Processes

The customer faced a significant roadblock in their document management system when using dynamic stamps for internal approvals, transaction sign-offs, and document verification. These dynamic stamps were meant to provide a clear and standardized way to approve documents, track workflows, and ensure that all signatures were timestamped and securely applied. However, employees across various departments struggled to customize and apply these stamps consistently, and manual intervention was required far too often.

The challenge was most noticeable in compliance, legal, and finance departments, where dynamic stamps are critical for regulatory requirements. Many employees who were not tech-savvy could not easily implement the specific customization needed for their dynamic stamps. The stamps didn't update in real time, and inconsistent timestamping made tracking approvals across a large organization difficult. This led to delays, confusion, and inefficiencies.

Turning Manual Pain Points into Automated Precision

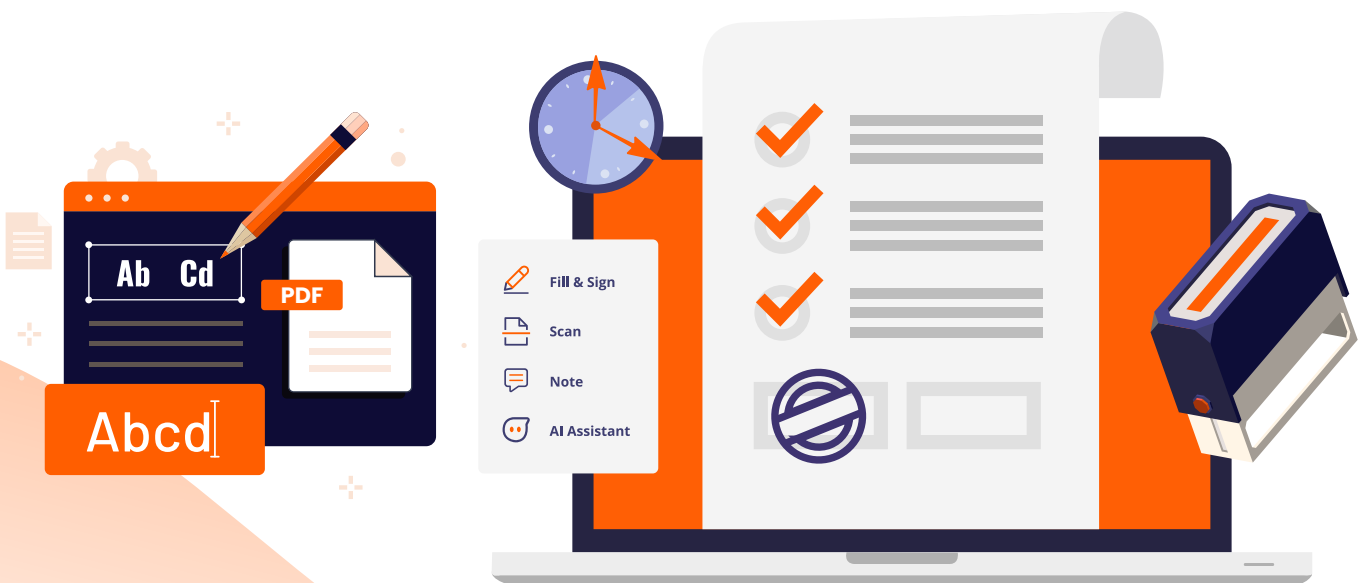

The customer recognized the problem's urgency and contacted Foxit's support team to seek a solution. Foxit Software Inc. responded promptly, introducing them to a more advanced feature of Foxit PDF Editor—the Custom Dynamic Stamps, enhanced with JavaScript functionality.

Foxit's experts worked closely with the customer's IT and document management teams to develop a customized solution that utilized JavaScript to automate and enhance the functionality of their dynamic stamps. JavaScript allowed for greater flexibility and control over how each stamp would behave, enabling real-time updates, precise time-stamping, and tailored metadata for each document. By integrating JavaScript with Foxit PDF Editor, the bank created dynamic stamps that adapted automatically to changing document conditions, improving accuracy and consistency.

Key Benefits and Results

The results were immediate and impactful. The bank's document processing times were reduced by 40%, and manual errors related to dynamic stamps dropped to near zero. The compliance and audit teams, in particular, noticed a significant improvement in the speed of reviews and the ease of tracking approval histories across various document types. Real-time updates and automated stamps saved time and ensured that all processes met stringent regulatory and compliance standards.

Additionally, employees across departments reported higher satisfaction with the PDF tools, as an intuitive and reliable solution had replaced the previously confusing and error-prone process of dynamic stamping. The IT team was also relieved, as they no longer had to provide frequent support for manual corrections or customization requests related to stamps.

"Our partnership with Foxit Software has been a **game changer** for our document workflows. Before the custom dynamic stamps solution, our teams were struggling with inconsistent and time-consuming processes. Now, with the introduction of JavaScript-powered dynamic stamps, **everything is automated and accurate**. This has dramatically improved our efficiency, saved us countless hours, and made our document approval process far more **secure and compliant**. Foxit truly understood our needs and delivered a solution that exceeded our expectations."

Senior Operations Manager, Banking Industry

Proof That the Right Tools Change Everything

What began as a persistent workflow bottleneck became an opportunity for transformation. By collaborating closely with the customer, Foxit delivered a purpose-built solution that automated approval stamps, eliminated manual errors, and helped the bank meet strict regulatory standards with confidence. The success of this implementation proves what's possible when the right tools meet the right challenge—and reinforces why organizations across industries turn to Foxit when accuracy, compliance, and efficiency are non-negotiable.
