

## How Foxit boosts end user productivity

Everyone knows that end users are in path-of-least-resistance mode at all times. That's why they drive IT crazy with BYOD and using unapproved apps and cloud storage.

So, when it comes to document creation, what can you do to smooth their path and still maintain control? Give them software like Foxit PhantomPDF. Here's why.

### Build better documents

Most PDF editors do just that—let you edit PDFs. PhantomPDF goes beyond mere PDF editing and is a full-fledged PDF creator too, giving you lots of ways to create PDF files, including:

- Creating a new PDF document as easily as you create a document with a word processor by adding and editing text, adding and modifying objects, and creating layouts.
- Using your favorite Microsoft Office software and virtually any other file format to create the most popular PDF formats—PDF, PDF/A, PDF/X, PDF/E, US Patent/Trademark Office compatible, and Section 508 accessible files.
- Scanning and OCR to turn paper documents into searchable PDF documents that move your organization towards paperless.
- Creating interactive forms and pull their data into your database, reducing data entry and the errors that come with it.
- Working the same way on any device, including desktop (Mac and Windows), and cloud (Chromebooks and other web enabled devices).

And, of course, you can do all this while collaborating with other users, making changes in real time that the whole team can participate in and stay on top of.

## Manage documents better

For many end users, publishing a document means hitting “send”. But there are other elements of sharing a document, such as version control, document storage and digital signing, that need to be considered.

### **Secure Confidential Information**

Many documents contain confidential information. PhantomPDF is the PDF Editor that provides multiple security options.

- Protect PDF Information with Redaction - Permanently remove (redact) visible text and images from PDF documents to protect confidential information. The redaction plugin enables redacted PDFs to be generated directly through Microsoft Word, Excel, and PowerPoint. When redacting larger documents, search and redact allows users to redact using text search or pattern searching. The Whiteout feature enables you to apply redaction with one-click to simply and securely erase any content to white background.
- Protect PDF with Document Sanitization - Removes sensitive information from your document before publishing, like metadata, comments, hidden data from previous saves, hidden layers, overlapping objects, and more.
- Protect PDF with Document Encryption - Using password or certificate encryption and control what actions others can operate on the document to protect confidential information.
- Protect PDF with Microsoft® Azure Information Protection (AIP) - Extends the usage control benefits of AIP to PDF documents and allows authors and admins to control rights management for each PDF. Provides both encryption and decryption capabilities.

### ***Sign Documents***

Foxit PhantomPDF provides users with three ways to sign digital PDF documents.

- Sign PDF with DocuSign - Send and sign PDF documents using the industry's most widely used eSignature solution.
- Sign PDF with Digital Signatures - Add digital signatures and timestamps to documents and allow the PDF receiver to validate the status of a digital signature to determine if the document has been modified since the signature was applied.
- Sign PDF Documents With Digital Ink - PDF Sign documents in your own handwriting. Create, manage, place, apply, and password protect multiple signatures-enabling effortless PDF document signing.

### ***Share content and integrate with ECMs and Cloud Storage***

When teams collaborate and share information, they work at their best. PhantomPDF is the PDF Editor that links knowledge workers together to increase flexibility and results.

- Integrate with popular Enterprise Content Management Systems to support existing workflows - Check in and check out; export data; create, compare, and organize; and convert to PDF from ndOffice; iManage WorkSite; Microsoft SharePoint; OpenText Documentum, Content Suite, and eDOCS; Citrix ShareFile; Worldox GX3; Alfresco; and Epona DMSforLegal for enterprise PDF collaboration.
- Support for popular cloud storage services to support existing workflows - Open and save PDF files in OneDrive, OneDrive for Business, Google Drive, Dropbox, Box, and Egnyte.

### ***Track Usage and Version Control***

Understand what happens to your document after publishing.

- Track usage of the document – view business intelligence information such as understand who accessed the file, what actions they performed, what pages they looked at, etc.
- View all versions of the document in an intuitive document version tree.
- Automatically notify readers when a new version of the document is available.
